

## Does your loved one have Persistent Postural Perceptual Dizziness (PPPD)?

- We'd love to hear your story!

### Why are we doing this study?

We know that as a partner, family member, close friend or other close relationship to someone living with PPPD, you play a vital role in their health and wellbeing. However, very little is known about the impact of PPPD on **you** and your daily life as a significant other. This University of Manchester Masters dissertation research project aims to explore this, so we can understand where support is needed and how we should best include you in your loved one's PPPD healthcare journey.

### What is Involved?

A short, 1:1 semi-structured interview held via Microsoft Teams to talk about your lived experience as the significant other of someone who has PPPD.

### You are eligible to take part if you are:

- A significant other of someone who has been diagnosed with PPPD. A significant other is someone who is a key figure in the person with PPPD's life (e.g. partner, close friend, parent or child) and has daily or near daily contact with them.
- + Over the age of 18
- + Living in the UK
- + Have access to a computer, tablet or mobile phone with video and a stable internet connection (for the Microsoft Teams conversation)
